SECOND BEGINNERS TRAINING SCHOOL ON THE USE OF HOME-CAGE TECHNOLOGIES TO MONITOR RODENTS

The school will provide instruction on the use of home-cages including: experimental design, psychiatric and cognitive assessment and application to welfare and the 3Rs and will include a workshop on the use of Ethovision and ANY-maze.

The target group of this training workshop: Masters, PhD and post-doctoral students, with at least 2 years hands-on research experience in rodent behavioural research. Participants will be expected to have sufficient experience within rodent behavioural research and data analysis to be able to contribute to discussions. All participants will be asked to give a short presentation of their work relevant to the course on Day 1 of the course.
